

ABSTRACT OF THE DISCLOSURE

7/1/03  
A  
~~It is an object to provide a controller in a banding~~  
packing machine which can easily set a correct condition  
when the controller for clamping, returning and tightening

5 a band has a timing shifted from a predetermined timing. A  
controller in a banding packing machine comprises a cam  
shaft (22) to be rotated upon receipt of force from a  
driving source, a plurality of cams (24, 26, 28) provided  
in the cam shaft (22), a timing plate (45) provided in the  
10 cam shaft (22) and having holes (42, 44, 46) formed  
corresponding to predetermined positions such that a  
rotation position of the cam shaft (22) can be detected,  
and detecting means (50) for detecting that the holes (42,  
44, 46) formed on the timing plate (45) reach the  
15 predetermined positions, wherein an inching mode is  
provided in which the rotation of the cam shaft (22) is  
stopped when the detecting means detects the predetermined  
holes (42, 44, 46) of the timing plate (45).
